

▶ Digital Recording & Retrieval

Data Dimensions offers nationwide digital voice recording, retrieval, and storage services. Our web-based, proprietary system provides user-friendly access to your quality digital voice recording files 24/7, offering a customizable and highly scalable solution.

Partnering with Data Dimensions allows you the ability to import, record, search (in numerous ways), download, and merge multiple files; assign permissions and alerts/notifications; and dictate reporting, archiving, and purging requirements. In addition, the system tracks every function completed throughout the process, ensuring compliance and transparency.

A digital recording can be assigned to different users in different locations, such as transcribers or legal counsel and can send automatic e-mail alerts/notifications. Furthermore, you have the capability to assign access to users and limited access on role-based levels.

Figure 1: Screen shot of digital recording and uploading from the Digital Voice Recording system, providing you with easy access to critical information you need at any time.

We allow for flexibility and customization of the system to fit your needs.

System Requirements:

- ♦ Windows XP™/Vista™ application installed on desktop
- ♦ Internet access
- ♦ Mic device (for recording)
- ♦ Windows Media Player™ (Version 10 or 11)
