

FOR IMMEDIATE RELEASE

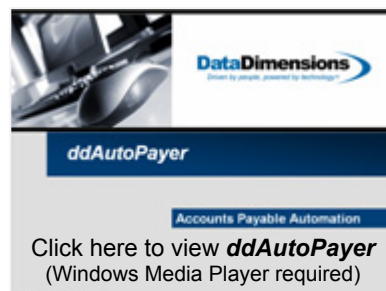

Data Dimensions Launches Robust Accounts Payable Automation Solution

ddAutoPayer, a Software as a Service (SaaS) Solution Provides Anywhere, Anytime Accounts Payable Processing

JANESVILLE, Wisconsin, May 3, 2010 – Today, Data Dimensions announced the launch of **ddAutoPayer**, a Web-based, on-demand service designed to boost efficiency by automating the accounts payable function.

With no need for additional capital investment, hardware, or software, businesses simply submit invoices from any location, using a secure Web portal. **ddAutoPayer** captures and verifies the invoice data utilizing optical character recognition (OCR). With a robust, customized business rules engine, **ddAutoPayer** processes the captured information utilizing your organization's unique business rules for a complete automated approval and exception handling process. Finally, verified invoice data is exported to the AP/ERP business application of choice for further processing.

President and Chief Executive Officer, Jon Boumstein stated, "Data Dimensions is committed to helping organizations automate document-centric processes, in a flexible, cost-effective delivery model. One of the biggest challenges surrounding A/P continues to be the mix of paper-based and electronic invoices received from suppliers. **ddAutoPayer** reduces the complexity and overhead of getting invoices into the appropriate format and to the right people at the right time, allowing organizations to reduce processing times and cash in on those early payment discounts."

About Data Dimensions

Since 1982, Data Dimensions has been helping clients better manage documents, processes, and workflow. As an innovative leader in the area of business process automation, we provide a complete range of outsourcing services and customized workflow solutions including mailroom management; digital document conversion services; data capture, imaging, and indexing; electronic and physical records storage and retrieval services; and much more. Data Dimensions' proprietary ECM software application, Collybus, is customizable and available as a licensed or web-based, hosted solution with document manger; document imaging; workflow;

email archiver; check21 processing; digital (voice and video) recording and retrieval; debit card creator; and construction loan manager modules.
